ABDHI P PATEL

PYTHON DEVELOPER | AI/ML ENTHUSIAST

+91 9019282910 • abdhipatel18@gmail.com • LinkedIn • Chamarajanagar

PROFILE

Motivated AI/ML and Python Developer with a strong foundation in machine learning, data analysis, and Python programming. Passionate about designing intelligent applications that solve real-world problems using AI-driven solutions. Experienced in developing and deploying machine learning models, building backend applications with Python and Flask, working with data preprocessing, model training, and recommendation systems. Eager to contribute technical skills, learn emerging AI technologies, and build scalable, data-driven applications.

TECHNICAL SKILLS

• Frontend Development	• HTML / HTML5	• CSS / CSS3	• PostgreSQL	• MySQL
• Computer Networks	• AI/ML	• OS	• DBMS	• Fast API
• Data Structures	• Python, JS	• Flask	• Git	

EDUCATION

Bachelor of Engineering in Computer Science (SJCE, Mysuru) | CGPA: 6.20 **2023-2027**

Pre University College (St Joseph PU College, Bengaluru) | Percentage: 82% **2021-2023**

PROJECTS

AI-Based Patient Risk Stratification & Scheduling Prioritization

Tech Stack: Python, Pandas, Scikit-Learn, Streamlit, OpenPyXL, YAML, Pytest, Machine Learning.

- Developed an automated decision-support pipeline that ingests, validates, and consolidates multi-source EHR patient data.
- Engineered a clinical risk engine and ML models (Random Forest, Logistic Regression) to stratify patients into 4 risk tiers with factor explanations.
- Implemented priority scheduling logic (1-3 month outreach windows) and built an interactive Streamlit dashboard with automated Excel exports.

AI Personalized Learning System

- Developed an AI-Based Personalized Learning System using Machine Learning and Flask to analyze student performance and learning.
- Implemented recommendation systems and predictive models to provide personalized study materials, adaptive content, and progress tracking.
- Utilized Python, Scikit-Learn, NLP, and data analytics techniques to improve student engagement and learning outcomes.

Smart Emergency Alert Web Application

Tech Stack: Flask, Python, PostgreSQL, Machine Learning, Twilio API, Google Maps API, HTML/CSS/JavaScript, Web Speech API.

- Developed an AI-powered web application for emergency response with real-time safety prediction and automated alerts.
- Integrated live GPS tracking via HTML5 Geolocation & Google Maps API, and hands-free voice triggers using Web Speech API.
- Built a Flask backend with PostgreSQL, ML safety score prediction, secure authentication, and multi-channel alert delivery.

CERTIFICATES

- **AI for Future Workforce** – Intel
- **AI Fluency: Framework and Foundations** – Anthropic
- **Claude 101** – Anthropic
